                                                                                                                                                                                         Bishop R.R.P., Gobright E.E.I.;
Submitted (APR-1997) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling as et of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of BcI-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SFVPSQKTYPGNYGFRLGFLQSGTAKSVTCTYSPSLNKLFCQLAKTCPVQLWVDSPPPP

The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour withch demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. It has been observed that the intron-exon organisation is conserved between p73 and p53, and from known exon and intron stacs for these 2 genes, it was possible to identify new members of this gene family using a PCR-based strategy of amplifying 2 exons in a conserved domain and their intervening intron. The human p53 gene was localised to chromosomal position intron. The human p53 gene was localised to chromosomal position of gamma forms, while p63 members differing in the N-terminus are designated as deltaN and TA forms, where the deltaN form lacks the capsignated as deltaN and TA forms, where the deltaN form lacks the designated as deltaN and TA forms, where the deltaN form lacks the capsignated as deltaN and TA forms, where the deltaN form lacks the capsignated as deltaN and TA forms, where the deltaN form lacks the p63 isotype hu-deltaNp63 alpha. p63 was detected in a variety of human and mouse tissue. It demonstrate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression may play a critical role in the process of cervical squamous differentiation, both benign and neoplastic. DeltaN isotopes of p63 may also be implicated in hammatopolesis, muscle wasting (e.g. cachexia) and neuronal differentiation and related degenerative disorders. p63 may also be implicated in hammatopolesis, muscle wasting (e.g. cachexia) and neuronal differentiation and related degenerative processes, in detection and diagnosis, and in the production of transgenic animals.
New isolated p63 cell regulatory protein for, e.g. treatment of
                                                                                   Claim 23; Fig 12; 161pp; English.

```
The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein or cellular protein isoforms (II) dependent on heat shock protein flow or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cencerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein or cellular protein isoform in a patient heteroxygous for (II). The method is useful cortaining disease e.g. hematopoietic disorder such as Tor B cellular tymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, In and Sandarderised by a solid tumour such as papillary thyroid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                       This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TFDALSPSPAIPSNTDYPGPHSFDVSFQQSSTAKSATWTYSTELKKLYCQIAKTCPIQIK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                φ
                  The present invention describes isolated human lung carcinoma polynecleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide and comparing the macunt of polynucleotide that hybridises to the oligonucleotide and presence of a cancer in the patient. (I) and (II) are useful in presence of a cancer in the patient. (I) and (II) are useful in the presence or absence of a cancer such as lung cancer.

Comparing the presence or absence of a cancer such as lung cancer.

ABQ92145 to ABQ92486 and ABP61986 to ABP61992 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

                                                                                              480
                                                                                                                         480
                                                                                                                                                   540
                                                                                                                                                                cancer. The polypeptides and monoclonal antibodies specific for the polypeptides can also be used to inhibit the development of lung cancer. Agents which bind the polypeptides can be used for detecting lung cancer and for monitoring the progression of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated lung tumor polynucleotides, used to develop products for the treatment, prevention and monitoring the progression of lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides isolated human lung tumor nucleic acids and polypeptides. The polypeptides can be used for the treatment of lung cancer. The polypeptides and polynucleotides can be used to stimulate cells or antigen presenting cells for use in the treatment of lung

                                                                                                                                                                                                                                                                                                                                                                       SPDDELLYLPVRGRETYEMLLKIKESLELMÖYLPQHTIETYRQQQQQQHQHLLQKQTSIQ 360
                                                                              This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have eytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting calls expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                        TFDALSPSPAIPSNTDYPGPHSFDVSFQQSSTAKSATWTYSTELKKLYCQIAKTCPIQIK 120

The present invention describes isolated human lung carcinoma polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide and oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in presence of a cancer in the patient. (I) and (II) are useful in a marker to indicate the presence or absence of a cancer such as lung cancer.

Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or

                                                                                                                                                                                                                                                                                                                                                     transactivation domain. The present sequence represents mouse p63 isotype murdeltahp63 alpha. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent cutvities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression may play a critical role in the process of cervical squamous cutferentiation, both benign and neoplastic. Deltan isotopes of p63 act as dominant negatives towards transactivation by p53 and p63. Cachexia) and neuronal differentiation and related degenerative cachexia) and neuronal differentiation and related degenerative disorders. p63 polypeptides (see AAN'58572-83) and anti-p63 antibodies of the invention can be used to identify compounds useful for treating disorders involving such transgenic animals.

                                                                                                                                                                                            The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using maplified cDNA possessed a truncated N-terminus, i.e. the ransactivation domain was absent. Additional splice variants were identified by screening a cDNA library with a probe corresponding to exons 5-9 of p63. At least 6 different isotypes exist. Splice variants differing at the C-terminus are designated as alpha, beta can gamma forms, while p63 members differing in the N-terminus are designated as deltan and TA forms, where the deltan form lacks the cransactivation domain. The present sequence represents mouse p63 isotypes and deltan and p63 was detected in a variety of the present sequence represents mouse p63 isotypes and passed passed passed passed p63 was detected in a variety of

The p51 gene can be used in the investigation, diagnosis and treatment of diseases such as cancer, with which the p53 family cell proliferation regulation is associated. The p51 protein may be used for screening potential agonists and antagonists of its regulatory function,

which demonstrate certain sequence identity to known tunnour suppressor proteins p53 and p73. It has been observed that the intron-exon organisation is conserved between p73 and p53, and from known exon and intron sizes for these 2 genes, it was possible to identify new members of this gene family using a PCR-based strategy of amplifying 2 exons in a conserved domain and their intervening intron. The human p53 gene was localised to chromosomal position 5347-29. At least 6 different isotypes exist. Splice variants differing at the C-terminus have been designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are designated as deltaN and TA forms, where the deltaN form lacks the transactivation domain. The present sequence represents human p53 sortype TAp63 alpha. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression differentiation, both benign and neoplastic. DeltaN isotopes of p63 are as dominant negatives towards transactivation by p53 and p63. Cechexia) and neuronal differentiation and related degenerative of sochexia) and neuronal differentiation and related degenerative of standards, and neuronal differentiation and related degenerative of standards, compounds useful for treating disorders involving such processes, in detection and diagnosis, and in the production of the invention of t

proteins (1), treating cancerous cells containing uncognized traction proliferative diseases associated with mutant protein or cellular protein soforms (II) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncognic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p53), or selectively treating cells expressing mutant protein or cellular protein isoform dependent on heat shock protein or cellular protein isoform dependent on heat shock protein or cellular for treating a disease e.g. haematopoietic disorder such as T or B cell imphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CML, or a disease characterised by a solid tumour such as appallary thyroid carcinoma, Ewiny's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral synovial sarcoma. The method is also useful for treating viral infections. This is the amino acid sequence of a human oncogenic protein. The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous
